Variables Quiz

Great job!

Your highest score: 80%

4 correct

1 incorrect

[Practice concepts](#)[Retake quiz](#)

1.

Take a look at the following code snippet. If we print out the final value of `numSides`, what would it be?

```
numSides
```

```
numSides = 4
```

[Continue learning](#)

```
numSides = triangle
```

Your correct answer

3

2.

The purpose of a variable is to:

Your correct answer

Store a value

3.

You're taking inventory at a clothing store. You have six shirts. Save the value of the number of shirts to the variable `shirts`.

Your correct answer

```
shoes = 8
```

shirts ☒ ☒

☒ 4.

When we use a value without assigning it to a variable, that's known as:

Your correct answer

Hardcoding

☐ 5.

Given the value of `myCookbook`, what do you think the value of `statement` will be?

```
myCookbook = 'The Joy of Cooking'
```

```
yourCookbook = 'How to Cook Everything'
```

```
statement = 'My favorite cookbook is ' + myCookbook
```

Your answer

'The Joy of Cooking'

Correct answer

'My favorite cookbook is The Joy of Cooking'

The value of `statement` is a concatenation of a string and the value of `myCookbook`. In this case, it combines "My favorite cookbook is " with the content of `myCookbook`, resulting in a complete sentence that includes both elements.
