✅ **1.**

Strings are called strings because:

✅ Your correct answer

Strings are a sequence of symbols, so we can think of each characters being strung

Continue learning

✓ 2.

Primitive data types include:

✓

Your correct answer

strings, numbers, booleans

⊗ 3.

True or False: the value of myFavoriteShow is a string.

```
myFavoriteShow = '24'
```

⊗

Your answer

False

✓

Correct answer

True

The value of `myFavoriteShow` is a string because it is enclosed in single quotes ('). In programming, wrapping a character sequence in quotes indicates that it should be treated as a string data type, regardless of its content.

✓ 4.

Data types are important because:

✓ Your correct answer

They identify different information used in programs.

✓ 5.

What data type is used in this code block?

```
isTouching = true
```

✓ Your correct answer

boolean
